Front-end
Citrix Delivery Assessment

Delivering the right applications to the right end users: this remains one of the biggest ICT challenges given the many technological possibilities. How can Citrix help you with this or how can you optimise your existing XenApp-/XenDesktop environment? The Citrix Delivery Assessment offers you an answer.

In this assessment, a Realdolmen consultant evaluates your existing infrastructure and helps you to have a better insight into the various 'delivery' methods. Based on an analysis of your existing environment and on an audit, you get the necessary information in order to optimise your XenApp / XenDesktop infrastructure.

The audit is not restricted to a technical review of the physical environment. The existing organisational management processes are also identified and may influence the setup. This gives you a proposal in which points of attention, readiness and requirements for each component of the delivery infrastructure are described.

WHAT DOES REALDOLMEN OFFER YOU?

SCOPE DEFINITION

A Realdolmen consultant will perform this assessment for one site. He comes onsite and provides the necessary documentation.

DELIVERABLES

- schematic overview
- assessment document
- recommendations
- presentation of initial findings

COSTS

- Max 5 servers: 2 300 EUR
- Max 10 servers: 3 200 EUR
- Max 20 servers: 4 100 EUR
- Max 50 servers: 5 000 EUR
- Max 100 servers: 5 900 EUR
- Max 200 servers: 6 700 EUR

All prices are excluding VAT

METHOD

This consultancy assignment consists of the following steps:

- **Kickoff meeting**
  Workflow, project expectations, logistics and planning are defined during this meeting.
- **Review meetings**
  Through interactive meetings with predetermined project participants, the required information for the assessment is being gathered.
- **Analysis and findings**
  The Realdolmen consultant makes a detailed summary of his findings.
  On this basis, recommendations are made and possible 'next steps' are determined. The initial findings are presented alongside.
- **Full documentation**
  You get the full assessment document.

SPECIFICATIONS

- The following is expected from the required technical and functional participants at the customer for the interactive meetings: they must be available for meetings with the consultant.
- The customer provides a suitable room for the assessment meetings.
- The Realdolmen consultant gets access to the production systems in order to analyse the existing environment.

RESPONSIBILITIES

- A Realdolmen consultant leads the meetings, documents the findings and presents them to those involved in the project .
- The project manager at the customer makes the planning and ensures that all required functional participants attend the assessment process.
- The functional participants at the customer, responsible for specific parts of the infrastructure, are personally responsible for their availability.
