REALDOLMEN
to get there, together

DIGITAL
MOBILE OFFICE

Nowadays, employees want access to company applications and data anywhere and at any time, using all kinds of different devices. You no longer just work in the office. The biggest benefit of this flexibility is an increase in efficiency, given that employees can perform their job at the location that suits them best. At the same time, this new mobile way of working does bring a few challenges with it. Realdolmen can provide the solutions for these.

CHALLENGES

- Many applications have already been converted into web (SaaS) and mobile applications, but there are still a whole swathe of legacy x86 applications that need to be supported.
- Access to shared and personal data has become more difficult because the file server where all the files are stored is only accessible internally.
- A fragmented device landscape makes support more difficult. In addition, more and more end users want to use their own devices.

A SELECTION OF OUR SOLUTIONS

INTEGRATION OF LEGACY APPLICATIONS

Traditional application delivery services do not always offer the flexibility of user experience that mobile employees are seeking. The use of existing cloud services is a potential solution to this problem. Yet unfortunately, there are still legacy applications that have to stay on the premises but need to be offered externally. Realdolmen provides the services needed to give your end users secure access to all your applications. We offer these services either as part of a specific project or as part of an outsourcing approach.

NetScaler | Remote Desktop Services | XenApp Express | Windows Store for Business | Azure App Proxy | Microsoft Intune

MOBILE PERSONAL DATA

As more and more employees no longer just work in an office, it is more complicated to organize access to shared and personal data. The file server where all the files are stored is still only accessible internally. Realdolmen can provide solutions to give your employees access to their data from any location.

OneDrive for Business | Microsoft Office | Office Mobile Apps

IMPROVING END USER DEVICES

Organizations today are faced with a dilemma. On the one hand, they want to have standardized devices, with 'approved' software that meets the ICT requirements of the business. On the other hand, employees who use the best and latest technology at home also want to be able to use these tools for their work. Nowadays it is no longer just knowledge workers who demand this, as was the case a few years ago, it is the majority of employees who want it.

The speed at which developments take place is stunning, and it changes the way in which we communicate, work and even our actual working environment. Nowadays, we are no longer closely tied to office buildings, office connectivity and business devices and services. We work with different types of connectivity any place, any time on any device.

Windows 10

The Digital Mobile Office is part of the Realdolmen Engaged Workplace offering

For Realdolmen, an Engaged Workplace means:

- Motivated employees
- Digitalized business processes
- A streamlined HR policy
- A flexible and secure IT infrastructure
- Making it possible to work from any place, at any time, on any device.
- Smarter collaboration and communication
- Training employees on how to use the new workplace efficiently
- Creating a culture that embraces the new workplace
